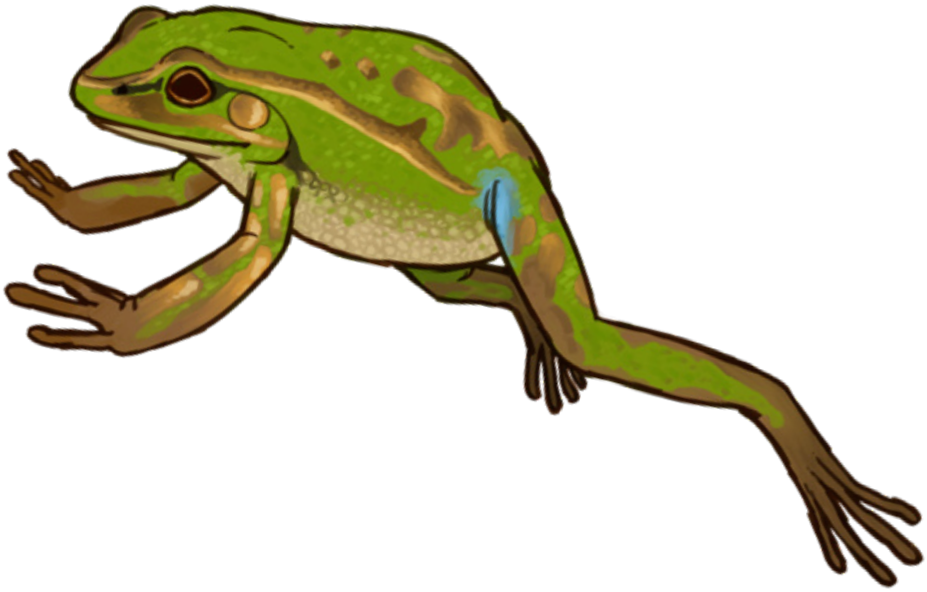
Green and golden bell frog



Did You Know?

Green and golden bell frogs are known for their beautiful green and gold skin. However, when cold or inactive these frogs will turn almost completely brown in colour!

Animal Snap!

NSW GOVERNMENT

Biodiversity Conservation Trust

Blue-banded bee

Did You Know?

Blue-banded bees pollinate by ‘buzz pollination’. This means they grab onto a flower and shake their body really quickly to get the pollen out. This makes them perfect for pollinating plants like tomatoes, blueberries and eggplants!

Animal Snap!

Noisy pitta

Did You Know?

While the noisy pitta is a shy bird, you may be able to see where one has been eating. They love to eat snails! and break the shells on a favourite rock before eating them, leaving a pile of broken shells behind.

Animal Snap!

NSW GOVERNMENT

Biodiversity Conservation Trust

Southern pygmy perch

Did You Know?

The southern pygmy perch prefers slow-flowing or still waterways with thick vegetation and plenty of cover.

Animal Snap!

NSW GOVERNMENT

Biodiversity Conservation Trust

Blue-tongue lizard

Did You Know?

They don’t lay eggs! Unlike other reptiles like snakes, turtles or crocodiles, blue-tongue lizards give birth to live young.

Animal Snap!

NSW GOVERNMENT

Biodiversity Conservation Trust

Brown treecreeper

Did You Know?

A brown treecreeper's favourite food is ants! They find them in the cracks of bark or around fallen logs.

Animal Snap!

NSW GOVERNMENT

Biodiversity Conservation Trust

White-crowned snake

Did You Know?

White-crowned snakes are nocturnal and love to hide in damp places like under logs, rocks and leaf litter during the day.

Animal Snap!

NSW GOVERNMENT

Biodiversity Conservation Trust

Superb fairy-wren

Did You Know?

Superb fairy-wrens always look for food in groups. This behaviour is very useful because insects that were disturbed by one bird may be caught by another.
